About NERI and this publication

The Nevin Economic Research Institute (NERI) has been established to provide information, analysis and economic policy alternatives. Further information about NERI may be obtained at our website www.NERInstitute.net

The purpose of this Quarterly Economic Facts (QEF) document is to provide regular, accessible and timely statistical information so as to equip trade unions and others in understanding economic trends and comparisons. All data are sourced from official sources with a clear link or reference to the website or publication from where they are drawn. Every care has been taken to ensure that the data were valid at the time of this release.

Each release of the QEF is complemented by another release – Quarterly Economic Observer which is available on the NERI website.

Indicator 7.4 General Government Debt as % of GDP (EU countries)	101
Appendix	103
Appendix 1 Details on the calculation and composition of indicators 3.2a and 3.2b	105

Overview

Recent years have seen a huge growth in the supply, range and timeliness of data from a variety of official agencies including the Central Statistics Office (CSO), the Northern Ireland Statistics and Research Agency (NISRA), Eurostat, the Organisation for Economic Cooperation and Development (OECD), the International Monetary Fund (IMF) as well as other agencies. Much of the data are publicly and readily available online together with detailed notes about the data. The QEF is not intended to provide an alternative to these sources. It provides a signpost to available sources of data. It selects a few indicators from key areas of concern: employment, unemployment, earnings and labour cost, inequality in income, poverty and public finances.

It is intended to expand and change a selection of indicators over time to cover a somewhat broader range of topics under each heading. However, to avoid information over-load (a not infrequent feature of many of the major statistical sources) it is planned to keep the overall number of indicators shown in this and subsequent editions within a reasonable and manageable size. Comments, queries and suggestions are welcome both in relation to the content as well as the overall scope of this publication.

Each indicator is laid out as follows:

- Definition
- Chart
- Data Table
- Interpretation
- Technical Notes and Sources.

For the purposes of comparisons across European States typically two averages are used where possible: EU 28 for all Member States and EU 15 for those Member States that were in the Union prior to 2004. The latter constitute a more homogeneous group in terms of GDP per capita. Unless otherwise stated, averages at the level of EU 28 or EU 15 are unweighted means.

Please note that, unless otherwise specified, all references to 'Ireland' in this edition of QEF refers to the Republic of Ireland only.

1 People in Paid Work

<i>Indicator 1.1a</i>	Employment and Unemployment Trends (Republic of Ireland)
<i>Indicator 1.1b</i>	Employment and Unemployment Trends (Northern Ireland)
<i>Indicator 1.2a</i>	Employment Change by Sector in the Republic of Ireland – Peak to Present
<i>Indicator 1.2b</i>	Employment Change by Sector in Northern Ireland – Peak to Present
<i>Indicator 1.3</i>	Numbers Employed in the Wide Public Sector (Republic of Ireland)
<i>Indicator 1.4</i>	Trends in Numbers Employed in the Public Sector in the Republic of Ireland

Indicator 1.1a Employment and Unemployment Trends (Republic of Ireland)

Indicator defined

Share of employed, unemployed and economically inactive in population of working age in the Republic of Ireland

Reference period for latest available data used in this indicator is 2012. Data extracted on 28 May 2012.
Next update due early 2014.

Chart 1.1a Share of employed, unemployed and 'economically inactive'

Table 1.1a Total population and share of employed, unemployed and 'economically inactive'

	Total aged 15-64 '000s	Employed	Inactive	Unemployed
1995	2,284.2	54.4%	38.1%	7.5%
1996	2,334.8	55.4%	37.3%	7.4%
1997	2,387.8	57.6%	35.9%	6.5%
1998	2,457.2	60.6%	34.4%	5.1%
1999	2,502.7	63.3%	32.8%	3.9%
2000	2,546.2	65.2%	31.9%	3.0%
2001	2,600.6	65.8%	31.7%	2.5%
2002	2,660.8	65.5%	31.6%	2.9%
2003	2,711.2	65.5%	31.4%	3.1%
2004	2,761.3	66.3%	30.6%	3.1%
2005	2,831.0	67.6%	29.2%	3.1%
2006	2,919.3	68.7%	28.1%	3.2%
2007	2,996.9	69.2%	27.5%	3.4%
2008	3,041.1	67.6%	28.0%	4.4%
2009	3,028.3	62.2%	28.9%	8.8%
2010	3,080.9	59.6%	30.6%	9.8%
2011	3,063.6	58.9%	30.8%	10.3%
2012	3,042.0	58.8%	30.8%	10.4%

Note: Percentages are for the total population. The unemployment rate is calculated as a percentage of the labour force (see part 2 of this publication).

Interpretation

Since 1995 there has been a gradual decline in the proportion of 'economically inactive' people. This trend has been partially reversed by the recession. The term 'economically inactive' is used by economists and statisticians to refer to persons who are not in paid employment (for typically more than one hour in the previous week at the time of survey). It is not intended, here, to imply that persons actively engaged in activities that are not remunerated in the labour market are not contributing very significantly to economic and social well-being.

Technical Notes

There is a statistical discrepancy between total population aged 15-64 (as recorded in the Quarterly National Household Survey) and the sum of employed, unemployed and the economically inactive. The actual percentages (of population) are presented in the table, while in the graph economically inactive is treated as a residual. The discrepancy is at its largest in 1997, at 1% of the population.

Indicator 1.1b Employment and Unemployment Trends (Northern Ireland)

Indicator defined

Share of employed, unemployed and economically inactive in population of working age in Northern Ireland

Reference period for latest available data used in this indicator is 2013. Data extracted on 28 May 2013.
Next update due Spring 2014

Chart 1.1b Share of employed, unemployed and 'economically inactive'

Table 1.1b Total population and share of employed, unemployed and economically inactive

Year	Total 16-64	Employment	Economically Inactive	Unemployed
1995	1003	60.40%	31.80%	7.80%
1996	1013	63.90%	29.50%	6.60%
1997	1024	64.30%	29.40%	6.30%
1998	1032	65.00%	28.90%	6.10%
1999	1039	65.10%	29.80%	5.10%
2000	1045	65.00%	30.30%	4.70%
2001	1055	65.00%	30.60%	4.40%
2002	1064	65.30%	30.30%	4.40%
2003	1072	68.60%	27.50%	3.90%
2004	1080	65.40%	30.90%	3.70%
2005	1092	67.10%	29.50%	3.40%
2006	1107	67.40%	29.50%	3.10%
2007	1121	68.70%	28.40%	2.90%
2008	1131	68.10%	28.60%	3.30%
2009	1139	64.70%	30.90%	4.40%
2010	1146	65.80%	29.20%	4.90%
2011	1152	66.90%	27.80%	5.20%
2012	1157	67.50%	27.50%	5.00%
2013	1162	66.60%	27.40%	6.00%

Notes: Data is for the period January-March of each year. Percentages are for the total population. The unemployment rate is calculated as a percentage of the labour force (see part 2 of this publication).

Interpretation

As shown above Northern Ireland has seen increases in both unemployment and economic inactivity. While the rate of economic inactivity has returned to pre-crisis levels, the level of unemployment remains at rates not seen since 1999. Northern Ireland still has a level of economic inactivity that is considerably higher than that of the UK as whole and thus direct comparisons can be misguided.

Technical Notes

Economic Activity, Employment and Unemployment rate are all calculated as a percentage of the working age population. The term 'working-age' refers to the 16-64 population for both males and females. Unemployment and economically inactive are calculated as residuals from employment and economically active.

Indicator 1.2a Employment Change by Sector in the Republic of Ireland – Peak to Present

Indicator defined

Employment at NACE 2 sectoral level comparing the level in Q1 2008 with current employment levels (seasonally adjusted).

Reference period for latest available data used in this indicator is Q1 of 2013. Data extracted on 22 August 2013. Next update due on or before the next edition of this publication.

Chart 1.2a Employment by sector between the peak to the latest available data in 2013 in the Republic of Ireland, (seasonally adjusted)

Table 1.2a Employment trends

	Q1 2008 '000s	Q1 2013 '000s
Administrative and support service activities	84.3	60.7
Information and communication	71.9	78.3
Transportation and storage	94.7	88.9
Agriculture, forestry and fishing	118.2	98.1
Public administration and defence, compulsory social security	104.4	95.6
Other NACE activities	99.7	99.4
Construction	257.7	96.5
Financial, insurance and real estate activities	106	100.7
Professional, scientific and technical activities	112	103.5
Accommodation and food service activities	133.2	121.2
Education	138.4	145.6
Industry	285.5	237.2
Human health and social work activities	223.5	249.7
Wholesale and retail trade, repair of motor vehicles and motorcycles	319.6	274.5

Interpretation

The wholesale and retail sector has remained the largest employment sector throughout the boom and the recession, notwithstanding the loss of over 46,000 of all jobs in the sector since peaking in Q1 2008. Three out every five construction jobs have been lost during the period Q1 2008 to Q1 2013.

Technical Notes

The CSO's *Quarterly National Household Survey* is conducted each week over a total sample of 39,000 households and is published on a quarterly basis. The households are surveyed over five consecutive quarters. The *ILO definition of the labour force* includes all those employed and unemployed over the age of 15, but excludes the inactive population. The *NACE codes* are employment sector classifications. *Seasonally adjusted data* is data that has been treated for calendar effects, seasonal variations etc. and is arrived using the X-12-ARIMA model. The seasonally adjusted factor is revised each quarter for all previous quarters.

In November 2012 the CSO revised estimates for previous periods.

Indicator: 1.2b Employment Change by Sector in Northern Ireland – Peak to Present

Indicator defined

Workforce jobs by industry (SIC 2007) - seasonally adjusted: all persons comparing the level in March 2008 with the most recently reported period.

Reference period for latest available data used in this indicator is December 2012. Data extracted on 28th May 2013. Next update due on or before the next edition of this publication.

Chart 1.2b Employment by sector, comparisons between 2008 and the latest available data for Northern Ireland

Table 1.2b Employment by sector, comparisons between 2008 and the latest available data for Northern Ireland

Industry	Q1 2008 '000s	Q1 2013 '000s
Agriculture, forestry and fishing	33	36
Mining and quarrying	3	2
Manufacturing	90	82
Electricity & gas	1	2
Water supply; sewerage, waste mgmt	5	5
Construction	81	45
Wholesale and retail trade	153	139
Transportation and storage	29	28
Accommodation and food service activities	46	45
Information and communication	20	20
Financial and insurance activities	21	21
Real estate activities	8	8
Professional, scientific and technical	33	32
Administrative and support service	50	46
Public administration	64	59
Education	73	71
Human health and social work activities	123	127
Arts, entertainment and recreation	19	19
Other service activities	20	19
Total	869	805

Interpretation

Overall total workforce jobs have fallen by 7% over the period from Q1 2008 to Q1 2013. The fall in construction of 44% remains the largest of all sectors. Mining and Quarrying has seen a fall of 33.3% in the same period. Agriculture has seen an increase of 9% over the period.

Technical Notes

Total workforce jobs is the sum of; employee jobs (measured by employer surveys), self-employment jobs (derived from the Labour Force Survey), government-supported trainees (from administrative sources) and HM forces (from Ministry of Defence records).

Source(s)

ONS workforce jobs by industry (SIC 2007) - seasonally adjusted

Indicator: 1.3 Numbers Employed in the Wide Public Sector (OECD countries)

Indicator defined

Total numbers employed in General Government and Public Corporations as a proportion of total Labour Force.

The reference period for the latest available OECD data used in this indicator is 2008. The next update is due in mid-2013 with the next edition of Government at a Glance (OECD) and will show data for 2010.

Chart 1.3 Numbers Employed in the Wide Public Sector as % of Total Labour Force – OECD Countries (2008)

Table 1.3 Numbers Employed in the Wide Public Sector as % of Total Labour Force – OECD Countries (2008)

Country	Gen. Gov.	Pub. Corps.	Total Pub Sector	Country	Gen. Gov.	Pub. Corps.	Total Pub Sector
Norway	29.6	4.9	34.5	Rep. of Ireland	14.8	1.9	16.7
Denmark	28.7	2.8	31.5	Israel	16.5	-	16.5
France	21.9	2.5	24.3	Australia	15.6	-	15.6
Finland	22.9	-	22.9	USA	14.6	-	14.6
Slovenia	14.7	7.9	22.7	Switzerland	9.7	4.8	14.5
Estonia	18.7	3.6	22.4	Italy	14.3	-	14.3
Poland	9.7	11.7	21.5	Germany	9.6	4.0	13.6
Netherlands	12.6	8.8	21.4	Spain	12.3	0.7	12.9
Greece	7.9	12.8	20.7	Turkey	11.0	1.0	12.0
Hungary	19.5	-	19.5	New Zealand	9.8	1.9	11.7
Czech Rep.	12.8	6.6	19.4	Mexico	8.8	1.2	10.0
Slovak Rep.	10.7	8.6	19.3	Chile	9.1	-	9.1
Canada	16.5	2.3	18.8	Japan	6.7	1.2	7.9
UK	17.4	1.2	18.6	OECD	14.8	3.6	18.4
Luxembourg	17.6	-	17.6				

Interpretation

Ireland's 'wide public sector' share of total employment, as last published by the OECD in 2011 was 16.7% for the year 2008. This was below the OECD country average of 18.4 in 2008 for those countries reporting data. However, this proportion is estimated to have increased to 18.7% for Ireland in 2010 as the total size of the labour force contracted significantly over the same period. More recent data are not available for other OECD countries in respect of the 2009-2011 period.

Technical Notes

OECD *Government at a Glance* was last published by the OECD in 2011 and shows total employment in general government and public corporations in 2008 and earlier years. The next edition of *Government at a Glance* (due 2013) will show data for 2010. The OECD use the International Labour Organization LABORSTA database as the source for information on public sector employment (see laborsta.ilo.org). The laborsta database contains more up to date information for some OECD countries in 2009 and 2010.

General Government is defined as all levels of government (e.g. central, state, regional and local) and includes core Ministries, agencies, departments and non-profit institutions that are controlled and mainly financed by public authorities. Public corporations are defined as legal units mainly owned or controlled by the government which produce goods and services for sale in the market. Examples of public corporations in some OECD countries include post offices, railways and mining operations. Public corporations also include quasi-corporations.

OECD *Government at a Glance* (2011): [Employment in general government and public corporations](#)

Indicator: 1.4 Trends in Numbers Employed in the Public Sector in the Republic of Ireland

Indicator defined

Total numbers employed in the public sector over time.

Data are based on Earnings, Hours and Employment Costs Survey (EHECS) of the Central Statistics Office. The data were extracted on 10th June 2013. The next update is due in late 2013.

Chart 1.4 Trends in Numbers Employed in the Public Sector in the Republic of Ireland (2008-2013)

Table 1.4 Trends in Numbers Employed in the Public Sector in the Republic of Ireland (2008-2013)

	Civil Service	Other public service (excluding Semi-State)	Semi-State	Total excluding Semi-State	Overall Total Public Sector
2008Q1	41,700	318,900	56,400	360,600	417,000
2008Q2	42,700	321,800	56,900	364,500	421,400
2008Q3	43,000	316,900	57,000	359,900	416,900
2008Q4	42,700	326,800	57,800	369,500	427,300
2009Q1	42,200	321,900	56,900	364,100	421,000
2009Q2	42,100	319,400	56,100	361,500	417,600
2009Q3	41,600	310,900	56,300	352,500	408,800
2009Q4	40,900	313,000	55,200	353,900	409,100
2010Q1	40,100	312,500	53,600	352,600	406,200
2010Q2	40,100	313,700	55,100	353,800	408,900
2010Q3	40,000	308,800	55,000	348,800	403,800
2010Q4	39,600	308,400	55,300	348,000	403,300
2011Q1	44,500	309,100	55,100	353,600	408,700
2011Q2	45,000	308,100	53,500	353,100	406,600
2011Q3	39,900	300,900	53,300	340,800	394,100
2011Q4	39,700	297,900	53,300	337,600	390,900
2012Q1	39,700	297,400	51,400	337,100	388,500
2012Q2	39,300	291,900	51,500	331,200	382,700
2012Q3	39,500	288,200	51,200	327,700	378,900
2012Q4	39,400	290,900	50,900	330,300	381,200
2013Q1	39,200	293,700	50,600	332,900	383,500

Interpretation

The CSO's data on trends in numbers employed in the public services shows a decrease in total numbers between 2011Q1 and 2012Q4. It should be noted that there was a temporary increase in numbers employed in early 2011 due to the employment of temporary Census of Population employees. Excluding these numbers, 2013Q1 marked the first increase since public sector numbers since the end of 2008.

Technical Notes

The data published by the CSO and used in this indicator refer to a headcount of all full-time and part-time workers as well as contract workers. The numbers reported by the CSO are not comparable to public sector numbers used by the Department of Public Expenditure and Reform which publishes full-time equivalent numbers.

Note: *Data from May 2013; **Data from Mar 2013

Interpretation

The rate of unemployment varied considerably across EU Member States. The average across the whole European Union was 11% while in the Republic of Ireland the rate was 13.5%.

Technical Notes

The standard definitions of the International Labour Organisation (ILO) are used by Eurostat to compare rates of economic activity in the labour market in European Union Member States. Data refer to all unemployed persons aged 15 to 74 who were not employed during the reference week, had actively sought work during the past four weeks and were ready to begin working immediately or within two weeks. Employed persons are all persons who worked at least one hour for pay or profit during the reference week or were temporarily absent from such work. The unemployment rate is the number of people unemployed as a percentage of the labour force. The labour force is the total number of people employed and unemployed. Data is seasonally adjusted

Slovenia	24.1	Netherlands	11.0
Belgium	23.8	Austria	9.3
Sweden	23.8	Germany	7.5

Notes: *Data from May 2013; **Data from Mar 2013

Interpretation

The rate of youth unemployment (for persons under the age of 25) is, on average, over twice the rate for all persons. However, in some Member States it is currently over one half of the entire young labour force.

Technical Notes

See notes for Indicator 2.1, above.

2012 Q3	60.0	44.3
2012 Q4	60.3	45.5
2013 Q1	62.4	

Interpretation

As total unemployment rates have increased across Europe the proportion of total unemployed who are long-term unemployed has increased especially since the first Quarter of 2009. The rate in the Republic of Ireland has risen sharply and overtook the EU 15 average in the last quarter of 2009. Currently, long-term unemployed account for over 60% of all unemployed in the Republic compared to just fewer than 30% in 2007.

Lithuania	17.1	Netherlands	10.8
Slovakia	17.0	Czech Republic	8.9
Estonia	16.8	UK	16.7

Notes: Data for Romania is unavailable

Interpretation

As job opportunities narrow an increasing number of workers drop out of the labour market, defined as all persons at work or actively seeking, and available for, work. Adding together all persons in employment including under-employed, unemployed (ILO definition), persons available for work but not actively seeking work (discouraged workers) and persons not immediately available but seeking work it is possible to estimate the total rate of unemployment and under-employment as a proportion of the 'wide labour force'.

Technical Notes

Underemployed part-time workers are persons working part-time who wish to work additional hours and are available to do so. Part-time work is recorded as self-reported by individuals.

Persons seeking work but not immediately available are the sum of persons neither employed nor unemployed who: (a) are actively seeking work during the last 4 weeks but not available for work in the next 2 weeks; or (b) found a job to start in less than 3 months and are not available for work in the next 2 weeks; or (c) found a job to start in 3 months or more; or (d) are passively seeking work during the last 4 weeks and are available for work in the next 2 weeks.

Persons available to work but not seeking are persons neither employed nor unemployed who want to work, are available for work in the next 2 weeks but are not seeking work.

2010 Q3	14.1	22.9
2010 Q4	14.3	23.3
2011 Q1	14.3	23.6
2011 Q2	14.6	24.5
2011 Q3	15.1	25.4
2011 Q4	14.5	24.8
2012 Q1	15.0	25.0
2012 Q2	15.0	25.8
2012 Q3	15.0	25.5
2012 Q4	13.7	24.6
2013 Q1	13.7	24.9
2013 Q2	13.9	24.7

Interpretation

As job opportunities narrow an increasing number of workers drop out of the labour market defined as all persons at work or actively seeking, and available for, work. Adding together all persons in employment including under-employed, unemployed (ILO definition) and persons available for work but not actively seeking work (discouraged workers) and persons not immediately available but seeking work it is possible to estimate the total rate of unemployment and under-employment as a proportion of the 'wide labour force'.

Technical Notes

The underemployment (PLS4) Indicator is unemployed persons plus Potential Additional Labour Force plus others who want a job, who are not available and not seeking for reasons other than being in education or training plus part-time underemployed persons as a percentage of the Labour Force plus Potential Additional Labour Force plus others who want a job, who are not available and not seeking for reasons other than being in education or training. This Indicator is broadly comparable to the previously published S3 indicator.

2010 Q2	27,000	56,000
2010 Q3	25,000	59,000
2010 Q4	28,000	67,000
2011 Q1	27,000	61,000
2011 Q2	32,000	63,000
2011 Q3	33,000	62,000
2011 Q4	35,000	62,000
2012 Q1	37,000	58,000
2012 Q2	42,000	66,000
2012 Q3	42,000	68,000
2012 Q4	45,000	67,000
2013 Q1	46,000	70,000
2013 Q2	39,000	64,000

Interpretation

This indicator shows the number of part-time workers who state their reason for working part-time as not being able to find full-time work. These workers will be counted as employed for national statistics but they are not employed to the level they wish to be. This is distinct from workers who chose part-time as a lifestyle choice such as a parent with young children or students in higher education. The level of unemployment is included to give a full picture of the health of the labour market.

Technical Notes

The measure of underemployment that this indicator refers to is time related underemployment and is ILO defined as those who, during the reference period used to define employment, were willing to work additional hours, were available to work additional hours, and whose hours actually worked in all jobs during the reference period were below a threshold to be determined according to national circumstances.

Northern Ireland LFS Quarterly Supplement [here](#)

Indicator 2.6 Unemployed Persons per Job Vacancy (Republic of Ireland)

Indicator defined

Ratio of the number of unemployed to the number of job vacancies

Data is the latest available as of 30 August 2013.

Chart 2.6 Ratio of unemployed to job vacancies in the first quarter of 2013

Notes: *Irish and Belgian vacancies are inferred from the vacancy rate.

Table 2.6 Ratio of unemployed to job vacancies in the first quarter of 2013

Country	Ratio	Country	Ratio
Cyprus	141.1	Hungary	15.8
Portugal	83.9	Czech Republic	11.6
Latvia	32.3	Estonia	10.4
Rep. Ireland*	32.3	Netherlands	6.0
Bulgaria	31.8	Sweden	5.9
Romania	26.4	Luxembourg	5.8
Slovakia	25.9	Belgium*	5.6
Slovenia	22.9	UK	5.2
Lithuania	22.0	Austria	3.4
Croatia	18.3	Germany	2.6

Notes: *Irish and Belgian vacancies are inferred from the vacancy rate.

Interpretation

The ratio of unemployed to job vacancies is an inverse measure of the extent of labour market tightness. The higher the ratio, the less opportunity unemployed individuals have to find employment.

Technical Notes

Data are published by the European Commission on a quarterly basis. Two sources are used for this indicator: the EU Job Vacancy survey and the Labour Force Survey (both undertaken by Eurostat).

Stock of *unemployed*: unadjusted, age 15-74. ILO definition.

Stock of *job vacancies*: number of paid posts that are newly created, unoccupied, or about to become vacant for which the employer is taking active steps and is prepared to take further steps to find a suitable candidate from outside the enterprise concerned, and which the employer intends to fill either immediately or within a specific period of time. Agriculture is excluded from the stock of job vacancies. Data are not available for Denmark, Greece, Spain, France, Italy, Malta, Poland or Finland.

Indicator 2.7 Young People Not in Education, Employment or Training (NEETs), ROI and NI

Indicator defined

Percentage of young people aged 18-24 not in employment and not in any education and training

Latest data available for year 2012 released 10th of April 2013. Next update due on or before the next date of publication

Chart 2.7 NEETs Northern Ireland and the Republic of Ireland

Table 2.7 NEETs Northern Ireland and the Republic of Ireland

Year	NI	Rep. of Ireland
2000	12.9	-
2001	14.9	-
2002	15.1	15.0
2003	11.1	12.9
2004	12.2	13.0
2005	9.3	12.6
2006	8.6	11.8
2007	14.7	12.5
2008	16.9	17.4
2009	18.2	23.1
2010	18.6	24.1
2011	19.2	24.0
2012	21.7	23.8

Interpretation

NEET statistics describe a situation where young people who are unemployed and not engaged in any education or training. This situation could lead to a state of permanent detachment from the labour market as the individual lacks experience or the training and skills necessary to gain employment. The NEET rate as described in the graph and table above shows that on both sides of Island the number of young people who find themselves in this situation has increased markedly since before the economic downturn. While the rate remains higher at present in Republic of Ireland, the overall increase to date has been broadly similar in both jurisdictions.

Technical Notes

The indicator corresponds to the percentage of the population of a given age who are not employed and not involved in further education or training. The numerator of the indicator refers to persons who meet the following two conditions: (a) they are not employed (i.e. unemployed or inactive according to the International Labour Organisation definition) and (b) they have not received any education or training in the four weeks preceding the survey. The denominator is the total population.

Portugal	12.25	14.07

Note: * Data for 2011 were not available for the following EU15 countries: Greece, Italy and Austria. Therefore, average is for 12 countries only.

Interpretation

Comparative data on what it costs to employ labour may be presented in a number of ways. In this presentation the focus is on the cost per hour adjusted, and not adjusted, for differences in the cost of living in a country as measured by PPS – the purchasing power standard estimated by Eurostat. The PPS method attempts to correct for differences in prices between countries.

Technical Notes

The total business economy includes all sectors of industry and services excluding public administration. Agriculture is not included.

Data for Greece, Italy and Netherlands were not available for 2011.

Hungary	20,806	7,646	5,081	33,533
Estonia	18,874	7,029	4,974	30,877
Slovenia	21,117	3,400	3,865	28,381

Interpretation

Comparisons of the cost of employing staff across countries is challenging. In its publication *Government at a Glance*, OECD provides comparative data in relation to the earnings and cost of employing certain categories of staff in the General Government sector according to an internationally agreed classification of occupations (ISCO-88). This indicator presents data for just one category – the grade of Clerical Officer or its equivalent in other countries (secretarial staff). The comparison indicates that average cost per employee is lower in the Republic of Ireland than the average across reporting OECD countries. The data are expressed in US dollars corrected for differences in the cost of living and refer to the year 2009. The impact of pay cuts in the public service in the Republic in 2010 are not, therefore, captured in this comparison.

Source(s)

Government at a Glance, OECD, Paris. Download table [here](#). It used the 2010 OECD Survey on Compensation of Employees in Central/Federal Governments, OECD STAN database. For further country-specific information as well as details on the methodology used see Annex D (available [here](#)). Further details on the calculation and composition of this indicator are available in appendix 1.

Indicator 3.2b Comparing Labour Costs in the Civil Service across OECD countries (Principal Officer)

Indicator 3.3 Comparisons of National Minimum Wage across the EU

Indicator defined

Monthly national minimum wages across the EU (Euro with, and without, adjustment for differences in cost of living PPS) for second half of 2013

Data is the latest available as of 30 August 2013.

Chart 3.3 Monthly National Minimum Wage across EU 28

Note: Austria, Cyprus, Denmark, Finland, Germany, Italy, and Sweden do not have a statutory national minimum wage.

Table 3.3 Monthly National Minimum Wage across EU 28

	€ (no PPS)	€ (PPS)
Luxembourg	1,874.19	1,538.79
Belgium	1,501.82	1,372.80
Netherlands	1,477.80	1,367.24
France	1,430.22	1,310.78
Rep. Ireland	1,461.85	1,271.01
UK	1189.92	1167.15
Slovenia	783.66	921.79
Malta	697.42	891.61
Spain	752.85	788.30
Greece	683.76	735.59
Poland	368.87	656.14
Portugal	565.83	653.08
Croatia	400.67	557.18
Hungary	332.37	547.94
Slovakia	337.7	472.12
Lithuania	289.62	439.61
Czech Republic	308.30	427.00
Estonia	320.00	400.29
Latvia	284.74	383.35
Bulgaria	158.50	324.01
Romania	179.36	312.77

Note: Austria, Cyprus, Denmark, Finland, Germany, Italy, and Sweden do not have a statutory national minimum wage.

Interpretation

National monthly minimum wages, adjusted for prices, reflect the minimum standard of living that a full-time employed worker can expect. Minimum wages (adjusted or not for prices) are not a suitable measure of labour cost competitiveness. This is as: many high pay countries without statutory minimum wages have de facto minimum wages; minimum wages do not include other labour costs, such as social insurance, which are low in Ireland; monthly wages depend on hours worked which vary across countries. In general, labour costs data gives a better indication of labour cost competitiveness (see indicators 3.1a, 3.1b, 3.1c, 3.2a, 3.2b)

Technical Notes

Belgium and Greece have a national minimum wage which is set by national intersectoral agreements. Eurostat includes both countries in the data collection as the minimum wage is fairly universal in coverage. For Ireland, France, the United Kingdom the minimum wage is fixed at an hourly rate, and for Malta the minimum wage is fixed at a weekly rate. These have been converted to a monthly rate.

Indicator 3.4 A Profile of Economic Inactivity among those who want to work in Northern Ireland

Indicator defined

Reasons for economic inactivity in Northern Ireland among those who want to work

Reference period for latest available data used in this indicator is Q1 2013. Data extracted on 28 of May 2013. Next update due April/May 2014

Chart 3.4 Reasons for Economic Inactivity, 1995-2013

Table 3.4 Reasons for Economic Inactivity, 1995-2013 (000's of workers)

Quarter	Long-term sick	Family & home care	Other
1995 Q1	9	25	27
1996 Q1	9	24	20
1997 Q1	16	23	17
1998 Q1	16	24	13
1999 Q1	18	23	16
2000 Q1	20	25	16
2001 Q1	21	18	14
2002 Q1	19	22	15
2003 Q1	14	21	9
2004 Q1	16	15	13
2005 Q1	11	13	11
2006 Q1	10	14	12
2007 Q1	17	13	11
2008 Q1	18	16	16
2009 Q1	16	9	17
2010 Q1	16	12	13
2011 Q1	15	15	15
2012 Q1	14	14	16
2013 Q1	15	13	19

Interpretation

The indicator gives reasons for economic inactivity among those who want a job. Northern Ireland has higher levels of economic inactivity compared to the UK. What the data show is a subtle decline in family and long-term illness as reasons for economic inactivity. The increase in “other” reasons suggests that further specific research is required to investigate what those reasons might be.

Technical Notes

The grouping above is taken from economically inactive workers aged 16+. Of these the graph and chart are based on those who want a job but had not sought employment in the previous four weeks.

Greece	17,200	19,200	EU-28	25,500	25,500

Note: PPS data for Latvia is for 2011.

Interpretation

GDP measures the value of all activities in the economy and the table and chart above provide values for this measure in 2012 on a per capita basis (divided by the population of the country). The GDP per capita figure for the Republic of Ireland was €35,700 in 2012, the sixth highest in the EU. Using Gross National Product, a measure which somewhat takes account of the income earned in Ireland and subsequently repatriated by multinational companies, the CSO reported Ireland's GNP per capita for 2012 as €28,928. In the UK GDP per capita in 2012 was equivalent to €30,500. There are no GDP figures available for Northern Ireland.

While the above data details the average levels of income, the remainder of this section examines the distribution of that income and wealth.

Technical Notes

As the real value of a Euro differs between countries, given variations in price levels, the data is also presented in PPS terms – the purchasing power standard estimated by Eurostat. The PPS method attempts to correct for differences in prices between countries and therefore gives a more comparable picture of the buying power of income.

Eurostat online database, GDP per capita - Annual Data [variable: nama_aux_gph]

Indicator 4.2a Income Distribution over Time (Republic of Ireland)

Indicators defined

Two measures are used to summarise the income distribution:

1. **The Gini coefficient** – an index ranging from 0 to 100 where 0 represents a perfectly equal distribution of income and 100 represents a perfectly unequal distribution (i.e. all the income is received by one individual).
2. **The income quintile ratio** – compares the % of the total disposable income (adjusted for household size) received by individuals in the bottom 20% (quintile) of the income distribution to that received by the top 20%.

Simply, the greater these numbers, the greater the level of income inequality.

Data is the latest available as of 30 August 2013.

Chart 4.2a (i) Gini coefficient

Chart 4.2a (ii) Income quintile ratio

Table 4.2a Gini coefficient and income quintile ratio for Ireland's income distribution, 2004-2011

	2004	2005	2006	2007	2008	2009	2010	2011
Gini coefficient	31.8	32.4	32.4	31.7	30.7	29.3	31.6	31.1
Income quintile ratio	5.0	5.1	5.0	4.9	4.6	4.3	4.9	4.9

Interpretation

Between 2004 and 2007 Ireland's income distribution was reasonably static with only small movements in both the measures reported above. Subsequently, during 2008 and 2009, the gap between the top and bottom quintile (20%) narrowed meaning income inequality fell to its lowest level since the introduction of the CSO's annual Survey on Income and Living Conditions (SILC). However, since 2009 both measures have increased once again. In 2011, the income of the top quintile was 4.9 times that of the bottom quintile while the Gini coefficient was 31.1.

Technical Notes

The data used to compile these figures comes from the CSO's Survey on Income and Living Conditions (SILC). This survey, which has been carried out annually since 2004, collects data on a representative sample of the national population with the latest survey in 2011 providing data on 11,005 individuals in 4,333 households. The income data used is disposable income, representing the income individuals have to spend once they have paid all their income taxes and received any welfare entitlements. Further details on the SILC survey and its income variables are available from the CSO documents and website references below.

Indicator 4.2b Income Distribution in Northern Ireland

Indicator defined

The distribution of total weekly household income in Northern Ireland classified by ranges of nominal income

Data is the latest available as of 30 August 2013.

Chart 4.2b The Distribution of Total Weekly Income in Northern Ireland by Household Income Range, 2011-12

Table 4.2b The Distribution of Total Weekly Income in Northern Ireland by Household Income Range.

Weekly income range	2009-10	2010-11	2011-12
Less than £100	2%	2%	2%
£100-£199	12%	11%	11%
£200-£299	16%	15%	15%
£300-£399	14%	14%	15%
£400-£499	11%	11%	10%
£500-£599	8%	10%	10%
£600-£699	8%	8%	9%
£700-£799	7%	7%	6%
£800-£899	4%	5%	5%
£900-£999	4%	5%	4%
£1,000 or more	14%	13%	13%

Note: Columns may sum to more than 100% due to data rounding

Interpretation

The results of the annual UK wide Family Resources Survey provide an insight into the distribution of income across households in Northern Ireland. Using the latest data, for the financial year 2011-12, the results presented above show that 53% of households have an income of less than £500 per week (£26,000 per annum). The table tracks trends in this distribution over the last three reports.

Technical Notes

Total weekly household income captures the income received by all household members from all sources including wages and salaries, state benefits, payable tax credits, private (occupational and personal) pension schemes and investments. The data is collected as part of the annual Family Resources Survey (FRS) by the Office of National Statistics. FRS represents the UK input into the European Union Survey on Income and Living Conditions (SILC). The 2011-12 survey for Northern Ireland comprises 1,943 households. The sample in 2009-10 was 2,041 and 1,896 in 2011-12.

Source(s)

Family Resources Survey 2011-12 (published June 2013) and earlier years is available at <http://research.dwp.gov.uk/asd/frs/>

Indicator 4.3a Average and Median Income over Time (Republic of Ireland)

Indicator defined

Average and median household disposable income (after taxes and transfers)

Data is the latest available as of 30 August 2013.

Chart 4.3a Average Household Disposable Income, 2004-2011

Table 4.3a Average and Median Household Disposable Income, 2004-2011 (€)

Year	Average Household Disposable Income	Median Household Disposable Income
2004	38,631	
2005	40,497	
2006	43,646	
2007	47,988	
2008	49,043	
2009	45,959	38,255
2010	43,151	
2011	41,819	

Note: Median income data is only available for 2009.

Interpretation

The CSO's Survey on Income and Living Conditions (SILC) commenced in 2003 and has provided full year data from 2004 onwards for household and individual incomes in Ireland. This indicator examines household disposable income representing the income a household has to spend after it has received all its incomes from employment, self-employment, investment and social transfers and after it has paid all its income taxation.

Between 2004 and 2008 average household incomes increased from €38,631 to just over €49,000 (almost 27%) reflecting increases in earnings, enhanced welfare payments and decreases in income taxation levels. Since then, this trend has been reversed with average disposable household incomes falling back to 2005 levels by 2011.

As the level of average household disposable incomes can be biased by household with very high, or very low, incomes, data for the median household is also presented. This data, only published for 2009, provides income data for the middle household in the Irish society. In 2009 this figure was €38,255.

Technical Notes

See indicator 4.2a.

Source(s):

See indicator 4.2a.

Indicator 4.3b Average and Median Income over time by Gender (Republic of Ireland)

Indicator defined

Average and median individual equivalised disposable income (after taxes and transfers) disaggregated by gender

Data is the latest available as of 30 August 2013.

Chart 4.3b Average Income for Males and Females, 2006-2011

Table 4.3b Average and Median Income for Males and Females, 2006-2011 (€)

Year	Average All	Average Males	Average Females	Median All	Median Males	Median Females
2006	21,229	21,882	20,577			
2007	23,610	24,046	23,173			
2008	24,380	24,640	24,121			
2009	23,326	23,627	23,029	20,107	20,568	19,699
2010	22,138	22,324	21,955			
2011	21,440	21,718	21,167			

Note: Median income data is only available for 2009.

Interpretation

This indicator uses data from the CSO's Survey on Income and Living Conditions (SILC) to examine the gender distribution of income in Ireland since 2006. The data is based on total household income (see indicator 4.3a) adjusted to take account of the number of adults and children in the households (see technical note below).

Throughout the period male and female incomes follow a similar trend. However, male incomes consistently exceed female incomes by between 1.5-6% per annum. Incomes peaked in 2008 and have since declined by 12% on average (by 11.8% for males and 12.2% for females) reflecting decreases in earnings, reduced welfare payments and increases in income taxation levels.

As the level of average individual equivalised disposable income can be biased by individuals in the income distribution with very high, or very low, incomes, data for the median person is also presented. This data, only published for 2009, provides income data for the middle person, middle male and middle female, in the Irish income distribution. On average in 2009 median male income was €20,568 and median female income was €19,699. The gap between median male and female income was €869; 4.4% of the median female wage.

Technical Notes

The data used to compile these figures comes from the CSO's Survey on Income and Living Conditions (SILC) as detailed in indicator 4.2a. Total household disposable income is adjusted to take account of the composition of households (number of adults and children) using the national equivalence scale. Following this adjustment the CSO report individual income, or income per adult equivalent, which is used for this indicator.

Source(s):

See indicator 4.2a.

Indicator 4.4 Wealth per Capita across EU countries

Indicator defined

Wealth per capita measured using net financial assets per person

Data is the latest available as of 30 August 2013.

Chart 4.4 Net Financial Assets per Person

Table 4.4 Net Financial Assets per person (€)

Country	2007	2011	Country	2007	2011
Belgium	68,593	67,851	Finland	21,624	19,244
Netherlands	59,045	61,348	Spain	21,698	16,328
Luxembourg	60,950	61,258	Slovenia	13,659	12,334
UK	56,128	53,297	Greece	19,681	10,105
Denmark	41,518	49,313	Czech Rep.	7,789	9,330
Sweden	37,703	45,948	Estonia	7,314	5,904
Italy	49,551	43,777	Hungary	6,378	5,250
France	40,739	41,523	Slovakia	3,672	4,850
Austria	37,131	40,220	Lithuania	2,617	4,277
Germany	35,501	38,715	Poland	5,498	4,044
Malta	24,875	26,596	Bulgaria	3,398	3,902
Rep. Ireland	23,634	26,279	Romania	4,007	2,415
Cyprus	37,927	21,964	Latvia	473	1,463
Portugal	19,950	19,750	Euro area (17)	37,289	36,201

Interpretation

Despite the financial crisis, net financial wealth per person has been remarkably stable across Europe. The average resident in Ireland owned €26,279 of financial wealth (such as cash, bank deposits, or shares) in 2011. This does not include non-financial wealth such as property. It should be noted that these are *net average* figures, and consequently they give no indication of the distribution of wealth or the financial strain many households are experiencing. In *net* terms, the per person financial wealth of Republic of Ireland residents is considerably less than wealthier EU countries and the Eurozone average. It is also half that of the UK.

Technical Notes

The EU(28) is omitted due to lack of data. The value of this indicator is calculated by taking Eurostat figures for a countries total consolidated net financial assets of households and non-profit institutions serving households and dividing this by the population as of 1st January of the relevant year.

Source(s)

Eurostat online database [variables nasa_f_bs and demo_pjan].

Indicator 4.5 Share of Wages in Total Income (Selected Countries)

Indicator defined

Compensation per employee as percentage of GDP expressed at market prices per person employed.

Data is the latest available as of 15 September 2013.

Chart 4.5 Share of wages as a % GDP (1995-2012)

Table 4.5 Share of wages as a % GDP (1960-2012)

Year	Rep. Irl	UK	US	EU-27	Euro-17

2006	48.7	61.9	60.6	56.8	56.0
2007	50.3	61.9	60.6	56.4	55.4
2008	55.2	62.0	61.0	57.1	56.4
2009	55.7	64.5	60.3	58.9	58.2
2010	53.3	63.5	59.4	57.9	57.3
2011	51.4	62.8	59.3	57.6	57.2
2012	50.6	63.9	58.8	58.0	57.4

Interpretation

The wage share is determined by capital intensity, technology and institutional factors. Globally there has been a general decline in the wage share, but Ireland's sharp decline since the 1990s, followed by partial recovery in 2007-2010, is unique.

Technical Notes

The wage share is the total compensation of employees (wages plus social insurance) divided by GDP. The wage share is adjusted by AMECO to account for self-employed workers.

150,000	200,000	17,101	0.82
200,000	275,000	9,308	0.45
over	275,000	9,830	0.47
Totals		2,088,443	100.00

Interpretation

The Revenue Commissioners income tax data for 2010 gives an indication of the distribution of earnings (from all sources which are subject to income tax) in the Republic of Ireland. In that year almost 36.5% of tax cases reported a gross income of less than €20,000. The data show that just over 40% of tax cases are in the range from €20,000 to €50,000 per annum. At the top of the distribution, 5% of tax cases had an income in excess of €100,000 and 1% had an income in excess of €200,000.

Technical Notes

Data used in this indicator is from the Revenue Commissioners annual statistical report and from the income distribution tables within that report (Table IDS1). Revenue only supplies data on tax cases rather than individuals. Also, it does not distinguish between the different sources of earnings (employment income, self-employment, property income etc). Due to the structure of the tax year and the system of provisional tax returns for certain earners, there is at least a year delay in the figures. The final tax payments for 2010 were settled in late 2011 and the data from these returns, used above, was published in the Revenue Commissioners 2012 report for the year ending December 31st 2011.

Revenue Commissioners (2012) Statistical Report for year ended 31st December, 2011. See: www.revenue.ie/en/about/publications/statistical-reports.html

Indicator 4.6b Distribution of Earnings (Northern Ireland)

Indicator defined

Distribution of earners by total income from employment, self-employment, pension and investment in Northern Ireland for the year 2010/11

Data is the latest available as of 30 August 2013.

Chart 4.6b Distribution of Earners by income range

Table 4.6b Distribution of earners by income range in Northern Ireland, financial year 2009/10

Income Range £s	No. of earners	% of earners	Income £m	% of income
6,475 - 9,999	106,000	13.93%	871	4.95%
10,000 - 14,999	178,000	23.39%	2,210	12.56%
15,000 - 19,999	151,000	19.84%	2,630	14.95%
20,000 - 29,999	168,000	22.08%	4,090	23.25%
30,000 - 49,999	121,000	15.90%	4,560	25.92%
50,000 - 69,999	21,000	2.76%	1,190	6.77%
70,000 - 99,999	9,000	1.18%	710	4.04%
100,000 - 149,999	5,000	0.66%	588	3.34%
150,000 - 199,999	1,000	0.13%	219	1.25%
200,000+	1,000	0.13%	522	2.97%
Total	761,000	100%	17,590	100%

Interpretation

The data for this indicator is compiled using income tax receipts for Northern Ireland in the financial year 2010/11. The data show that just over 48% of income liable for tax is from earnings of between £20,000 and £50,000. While income of £100,000 - £150,000 and £150,000-£200,000 represent 4.5% of total income reported, incomes over £200,000 represent the same percentage of total income. The largest numbers of earners are those with incomes of £10,000 to £15,000, yet this band only represents 12.5% of total income in Northern Ireland.

Technical Notes

The data is from the results of the HMRC Survey of Personal Incomes 2010-11 using information held by HMRC on persons liable to UK income tax for the income tax year. It is carried out annually and covers the income assessable for tax in each tax year.

5 Poverty and Social Exclusion

<i>Indicator 5.1</i>	Poverty and Deprivation (Republic of Ireland)
<i>Indicator 5.2</i>	Child Poverty (Republic of Ireland)
<i>Indicator 5.3</i>	In Work-Poverty (Republic of Ireland)
<i>Indicator 5.4</i>	Poverty and Deprivation by Gender (Republic of Ireland)
<i>Indicator 5.5</i>	Poverty in Northern Ireland

Indicator 5.1 Poverty and Deprivation (Republic of Ireland)

Indicators defined

At risk of poverty rate: The proportion of individuals with disposable income of less than 60% of median income.

(Enforced) Deprivation rate: The proportion of individuals who cannot afford two or more items from a list of 11.

Consistent poverty rate: The proportion of individuals who are at-risk of poverty and also experiencing enforced deprivation.

Data is the latest available as of 30 August 2013.

Chart 5.1 Trends in poverty and deprivation, 2004-2011 (%)

Table 5.1 Poverty and Deprivation rates for the Republic of Ireland as a % of the population, 2004-2011

	2004	2006	2007	2008	2009	2010	2011
At risk of poverty	19.4	17.0	16.5	14.4	14.1	14.7	16.0
Deprivation	14.2	14.0	11.8	13.8	17.1	22.6	24.5
Consistent poverty	6.6	6.6	5.1	4.2	5.5	6.3	6.9

Interpretation

The at risk of poverty or 'relative income poverty' rate fell from 2004 to 2009. However, the rate increased from 14.1% in 2009 to 16% in 2011, despite the fact that the threshold level (60% of median disposable income) declined by 10% between 2009 and 2011 (from €12,064 to €10,889); this reflects an overall decline in incomes over that period.

Enforced deprivation, measuring the number of individuals deprived of two or more basic items (see technical notes for list) fell to as low as 11.8% in 2007. However, it has increased since as the impact of the recession hit households. By 2010 22.6% of the ROI population were experiencing deprivation. Between 2009 and 2011, the increase in deprivation was predominantly among those not at risk of poverty, up from 13.5% in 2009 to 21% in 2011. During 2010, the main items where people experience enforced deprivation were: 'unable to afford to replace any worn out furniture' (21.7%); 'unable to afford a morning, afternoon or evening out in the last fortnight' (21.1%); and 'unable to afford to have family or friends for a drink or meal once a month' (14.8%).

The rate of consistent poverty measures the sub-section of the population who are at risk of poverty and experiencing deprivation. This measure is the focus of the government's official poverty target which aims to reduce those experiencing consistent poverty to 4% by 2016 and to 2% or less by 2020. Between 2004 and 2008 the rate fell, but it has since increased to 6.9% in 2011.

Technical Notes

The data used to compile these figures comes from the CSO's Survey on Income and Living Conditions (SILC) and has been described in the technical notes accompanying indicator 4.2a. The at risk of poverty threshold is calculated as 60% of median equivalised disposable income.

The eleven indicators used to measure deprivation are: Without heating at some stage in the last year; Unable to afford a morning, afternoon or evening out in the last fortnight; Unable to afford two pairs of strong shoes; Unable to afford a roast once a week; Unable to afford a meal with meat, chicken or fish every second day; Unable to afford new (not second-hand) clothes; Unable to afford a warm waterproof coat; Unable to afford to keep the home adequately warm; Unable to afford to replace any worn out furniture; Unable to afford to have family or friends for a drink or meal once a month; Unable to afford to buy presents for family or friends at least once a year.

Indicator 5.2 Child Poverty (Republic of Ireland)

Indicators defined

Children at risk of poverty: The proportion of children living in households whose equivalised disposable income is less than 60% of median income.

Children in consistent poverty: The proportion of children living in households who are at-risk of poverty and also experiencing enforced deprivation. Children are defined as being aged between 0-17 years.

Data is the latest available as of 30 August 2013.

Chart 5.2 Child Poverty, 2006-2011 (%)

Table 5.2 Child poverty for ROI as a % of the population of children aged 0-17yrs, 2006-2011

	2006	2007	2008	2009	2010	2011
At risk of poverty	22.3	19.9	18.0	18.6	18.4	18.8
Consistent poverty	10.3	7.4	6.3	8.7	8.8	9.3

Interpretation

The proportion of the ROI's children living in households whose income is below the 60% of median income poverty line has experienced limited change over the past few years. While the years 2006-07 recorded a decrease from 22.3% to 19.9%, by 2011 almost 1 in every 5 children (18.8%) lived in a household experiencing relative income poverty.

Over the period 2006-2008 the proportion of children living in households experiencing both relative income poverty and deprivation (consistent poverty) decreased from 10.3% to 6.3%. However, since then it has increased and in 2011 9.3% of the ROI's children experienced consistent poverty.

Technical Notes

The data used to compile these figures comes from the CSO's Survey on Income and Living Conditions (SILC) and has been described in the technical notes accompanying indicator 4.2a. The at risk of poverty threshold is calculated as 60% of median equivalised disposable income. The items used to measure enforced deprivation have been described in the technical notes accompanying indicator 5.1.

Prior to 2006 the CSO measured child poverty for children aged 0-14yrs and found that in both years 21.2% of children in this age group lived in households whose income is below the 60% of median income poverty line. The consistent poverty rate for this age group was 9.5% in 2006 and 10.2% in 2007.

Indicator 5.3 In Work-Poverty (Republic of Ireland)

Indicators defined

Workers at risk of poverty: The proportion of individuals whose principle economic status is 'at work' and whose equivalised disposable income is less than 60% of median income.

Workers in consistent poverty: The proportion of individuals whose principle economic status is 'at work' and who are at-risk of poverty and also experiencing enforced deprivation.

Data is the latest available as of 30 August 2013.

Chart 5.3(i) In-work Poverty, 2004-2011 (%)

Chart 5.3(ii) Composition of those at risk of poverty 2011 (%)

Table 5.3(i) In-work poverty in the ROI, 2004-2011

	2004	2006	2007	2008	2009	2010	2011
At risk of poverty	7.0	6.5	6.7	6.7	5.5	5.7	6.5
Consistent poverty	1.8	1.6	1.3	1.1	1.1	1.3	2.1

Table 5.3(ii) Composition of those at risk or poverty in the ROI, 2009-2011

	2009	2010	2011
At Work	14.3%	13.5%	14.2%
Unemployed	12.9%	15.1%	16.6%
Student	14.6%	12.3%	14.7%
Home duties	18.0%	17.3%	17.5%
Retired	4.7%	4.4%	4.3%
Ill/disabled	6.4%	5.4%	4.8%

Note: The percentages do not total to 100% as those in poverty and aged under 16 years are excluded.

Interpretation

Between 2004 and 2008 there was limited change in the proportion of individuals whose principle economic status is 'at work' and who were living at risk of poverty. However, by 2009 the rate dropped to 5.5% before increasing to 6.5% in 2011. Similarly, consistent poverty levels among those at work declined over much of the period before increasing once again in 2010 and 2011.

Despite the fact that the rate of relative income poverty (6.5%) and consistent poverty (2.1%) is low among those whose principle economic status is work, the fact that the working population comprises a large part of the population aged 16 years and above results in a high number of workers being in poverty. Using the 2011 data, when poverty among those aged 16 years and above is decomposed by principle economic status, those at work (the working poor) account for 14.2% of people at risk of poverty.

Technical Notes

See notes for indicators 4.2a, 5.1 and 5.2. The composition of those at risk of poverty is decomposed by principle economic status for all those aged 16 years and above. The tables and charts above exclude figures for children under 16 years who are living in households that are at risk of poverty.

Source(s)

See all the sources listed under indicator 4.2a.

Indicator 5.4 Poverty and Deprivation by Gender (Republic of Ireland)

Indicators defined

At risk of poverty rate: The proportion of individuals with disposable income of less than 60% of median income – data for all the population any by gender.

(Enforced) Deprivation rate: The proportion of individuals who cannot afford two or more items from a list of 11 – data for all the population any by gender.

Consistent poverty rate: The proportion of individuals who are at-risk of poverty and also experiencing enforced deprivation – data for all the population any by gender.

Data is the latest available as of 30 August 2013.

Chart 5.4a Trends in poverty by gender, 2006-2011 (%)

Charts 5.4b/5.4c Deprivation and Consistent Poverty by gender, 2011 (%)

Table 5.4 Poverty and Deprivation by Gender, 2006-2011 (%)

	2006	2008	2009	2010	2011
At risk of poverty – All*	17.0	14.4	14.1	14.7	16.0
Males	16.6	14.0	14.1	14.3	16.3
Females	17.4	14.9	14.1	15.1	15.6
Deprivation – All*	13.8	13.8	17.1	22.6	24.5
Males	n/a	13.3	16.8	21.7	23.0
Females	n/a	14.3	17.7	23.5	26.0
Consistent Poverty – All*	6.5	4.2	5.5	6.3	6.9
Males	6.4	4.0	5.5	5.8	6.9
Females	6.6	4.5	5.4	6.8	6.9

Note: * All refers to the rate for the population of the ROI.

Interpretation

As the tables and charts for this indicator show, males have a higher risk of poverty than females (in 2011) while females experience a higher level of deprivation than males.

Technical Notes

See indicator 5.1.

Indicator 5.5 Poverty in Northern Ireland

Indicator defined

A household is counted as being in poverty if its income is less than 60% of the median UK household income adjusted for household size and composition.

Poverty rates are estimated before housing costs (BHC) and after housing costs (AHC) where these costs include rent, service charges and mortgage interest payments.

Data is the latest available as of 10 September 2013.

Chart 5.5 Trends in poverty in Northern Ireland and the UK, Before Housing Costs (%)

Table 5.5 Trends in Poverty in Northern Ireland, Before (BHC) & After (AHC) Housing Costs as % of the population, 2002-2012

	02-03	06-07	07-08	08-09	09-10	10-11	11-12
Population BHC	20	19	20	20	22	20	21
Children BHC	25	22	24	24	27	21	22
Pensioners BHC	24	28	27	30	24	22	25
Population AHC	21	19	21	20	23	20	23
Children AHC	27	23	27	26	29	24	27
Pensioners AHC	18	21	21	20	18	15	15

Interpretation

Using data from the UK Family Resources Survey *Households Below Average Income* dataset, the Northern Ireland Statistics and Research Agency (NISRA) provide details on the levels and trends in poverty in Northern Ireland. The data for this indicator is for the period from 2002-2012 and are calculated for the UK financial year April-March.

Over time the level of poverty in Northern Ireland (before housing costs) has remained reasonably static at around one fifth of the population. In 2012, there were 379,100 people in Northern Ireland living on an income below the poverty line. The Northern Ireland rate is slightly higher than that for the UK. Within the population, the level of child poverty is high, with between one in every four or five children in Northern Ireland living in poverty – the number for 2011/11 is 94,500 children. Among pensioners, one in every four (71,600 in 2011/12) live on an income below the poverty line.

Technical Notes

The data used to compile these figures comes from the Department of Work and Pensions' study entitled '*Households Below Average Income*'. Poverty is calculated before and after housing costs where the household income is equivalised, or adjusted, to take account of the size and composition of the household. Following this process, an income per adult-equivalent is achieved and this is used as the basis for setting the poverty lines. For the period 2011/12 the poverty thresholds in Northern Ireland were:

	Before Housing Costs	After Housing Costs
Couple – no children	£256	£220
Single – no children	£172	£128
Couple with 2 children under 14 years	£392	£357
Lone parent with 2 children under 14yrs	£308	£264

6 Social Welfare Payments

Indicator 6.1 Unemployment Benefits Compared to Earnings (OECD countries)

Indicator 6.2 Unemployment Benefits Compared to Earnings in the Republic of Ireland and the United Kingdom

Indicator 6.1 Unemployment Benefits Compared to Earnings (OECD countries)

Indicator defined

We compare pre and post Unemployment income using **the replacement rate**. It refers to the level of welfare provided immediately after the individual becomes unemployed and calculates this as a proportion of previous after tax or net income.

The figures in this assessment are based on an individual earning 67% of the average wage in each OECD country before becoming unemployed.

Data is the latest available as of 30 August 2013.

EU Median	66	66	84	73	72	85

Chart 6.1 Republic of Ireland Net Replacement Rates for six family types in initial phase of unemployment compared to the EU and OECD median values, 2011

Interpretation

Replacement rates compare income prior to unemployment with income from welfare after unemployment. Across the OECD these rates range from 19% (UK single person) to 96% (Slovenia two-earner married couple). Given the variation in individual country replacement rates, reflecting the nature and composition of welfare entitlements in these countries, the data shows the futility of making simple cross country comparisons based on one particular type of individual/household. The ROI possesses the fifth lowest replacement rate for single unemployed people with no children within the OECD (50%), only the UK, Australia, New Zealand and Greece possessing lower rates. Of the six household types examined by the OECD (see table and chart) four record replacement rates below the OECD and EU median values and two above these median values.

Technical Notes

Data is from the OECD's Tax-Benefit Calculator. The OECD also examine replacement rates for individuals at 100% and 150% of average earnings. The data in the table and chart is from 2011, the latest comparable data available from the OECD, and assumes families do not qualify for cash housing assistance or social assistance top ups. Since 2011 changes to welfare rates and average earnings will have altered these replacement rates.

Source

OECD Tax-Benefit Calculator: www.oecd.org/els/benefitsandwagesstatistics.htm

Indicator 6.2 Unemployment Benefits Compared to Earnings in the Republic of Ireland and the United Kingdom

Indicator defined

We compare pre and post Unemployment income using **the replacement rate**. It refers to the level of welfare provided immediately after the individual becomes unemployed and calculates this as a proportion of previous after tax or net income.

The figures in this assessment are based on an individual earning 67%, 100% and 150% of the average wage in each country before becoming unemployed.

Data is the latest available as of 30 August 2013.

Table 6.2 Net Replacement Rates for six family types in initial phase of unemployment, ROI, UK, EU and OECD 2011

	No children			2 children		
	Single person	One-earner married couple	Two-earner married couple	Lone parent	One-earner married couple	Two-earner married couple
67% of the average wage						
ROI	50	81	75	64	75	81
UK	19	30	60	48	56	68
EU median	66	66	84	73	72	85
OECD median	65	66	84	73	71	84
100% of the average wage						
ROI	36	58	63	63	67	69
UK	13	21	49	40	47	56
EU median	56	59	74	67	66	77
OECD median	56	58	74	67	64	77
150% of the average wage						
ROI	28	43	52	52	54	58
UK	9	15	39	29	35	45
EU median	46	45	63	53	53	67
OECD median	45	46	62	52	52	66

Interpretation

Replacement rates compare income prior to unemployment with income from welfare after unemployment. The table above compares replacement rates for individuals/households in the initial phase of unemployment (in effect the first year of unemployment) in ROI and the UK. The OECD's calculations assume that families do not qualify for cash housing assistance or social assistance top ups.

The results show a variation in replacement rates between ROI and the UK with those in the ROI being higher than the UK for all household types. The scale of this difference varies by household type and OECD data suggests the gap reduces when account is taken of housing assistance and secondary social assistance payments.

Across all of the 18 household types examined, in four cases the ROI replacement rates are higher than the OECD and EU median values: one-earner married couple no children at 67% of average earnings and one-earner married couple two children at 67%, 100% and 150% of average earnings. In the UK all the replacement rates are below the EU and OECD medians.

Comparisons of net replacement rates do not take into account differences in various types of non-cash payment benefits to households such as subsidised services or exemption from various charges.

Technical Notes

See note to indicator 6.1.

2004	46.7	33.6	43.8	35.0
2005	46.7	33.9	44.2	35.5
2006	46.2	34.4	44.6	37.3
2007	45.5	36.7	44.6	36.7
2008	47.0	42.7	44.6	35.4
2009	51.0	48.3	44.1	34.5
2010	50.5	65.4	44.0	34.9
2011	49.0	47.1	44.6	34.1
2012	49.3	42.0	45.4	34.5

Interpretation

Public expenditure relating to bank recapitalisation in each of the three years 2009, 2010 and 2011 is included in the figures for Government spending in the above table and chart.

A feature of fiscal adjustment as pursued in the Republic of Ireland, both before and after the November 2010 Troika Agreement, is that it has leaned on expenditure and not on revenue. When measured as a percentage of GDP, the entire adjustment is on the expenditure side with the share of total revenue in GDP staying roughly constant over the remainder of the adjustment period.

Technical Notes

Total General Government Revenue includes taxes and other receipts of public authorities

Indicator 7.2 Government Revenue as a % of GDP (EU27 and Republic of Ireland)

Indicator defined

Total General Government Revenue as % of GDP

Data is the latest available as of 30 August 2013.

Chart 7.2 General Government Revenue % GDP 2012

Table 7.2 General Government Revenue % GDP 2012

Country	%	Country	%
Lithuania	32.8	Greece	44.7
Slovakia	33.1	Slovenia	45.0
Romania	33.5	Germany	45.2
Rep. Ireland	34.5	EU 27	45.4
Bulgaria	34.9	EU 15	45.9
Latvia	35.2	Netherlands	46.4
Spain	36.4	Hungary	46.6
Poland	38.4	Italy	47.7
Cyprus	40.0	Austria	49.1
Estonia	40.2	Belgium	50.9
Malta	40.2	Sweden	51.3
Czech Republic	40.3	France	51.8
Portugal	41.0	Finland	54.4
UK	41.6	Denmark	55.3
Luxembourg	42.1	Greece	44.7
Lithuania	32.8		

Interpretation

As an alternative to comparing countries with reference to GDP Gross National Income (GNI) may be used. However, where GNI is used it is necessary to deduct an estimate for corporate taxes on repatriated profits which appears as part of GDP but not GNI.

Technical Notes

Total General Government Revenue includes taxes and other receipts of public authorities

Indicator 7.3a General Government Deficit as a % of GDP (EU member states)

Indicator defined

Total General Government Deficit as % of GDP

Data is the latest available as of 30 August 2013.

Chart 7.3a General Government Deficits % GDP (2012)

Table 7.3a General Government Deficit % GDP (2012)

Country	%	Country	%
Germany	0.2	Poland	-3.9
Estonia	-0.3	EU 27	-4.0
Sweden	-0.5	Denmark	-4.0
Bulgaria	-0.8	Slovenia	-4.0
Luxembourg	-0.8	Netherlands	-4.1
Latvia	-1.2	Slovakia	-4.3
Hungary	-1.9	Czech Republic	-4.4
Finland	-1.9	France	-4.8
Austria	-2.5	Cyprus	-6.3
Romania	-2.9	UK	-6.3
Italy	-3.0	Portugal	-6.4
Lithuania	-3.2	Rep. Ireland	-7.6
Malta	-3.3	Greece	-10.0
Belgium	-3.9	Spain	-10.6

Interpretation

The Maastricht rules require European member states to aim for a Government deficit of no more than 3%. The latest estimates of General Government Balance (the headline deficit) for 2011 shows that 18 out of 27 member states were in excess of this figure. In the case of the Republic of Ireland, in 2012, the 'headline' government deficit was estimated to be 7.6%.

Technical Notes

The General Government Deficit (or General Government Balance) is the difference between General Government Expenditure and General Government Revenue in any given year. An excess of expenditure over revenue is expressed as a percentage of GDP and is shown as a negative value.

Indicator 7.3b Estimated General Government Structural Deficit as % of GDP (EU countries)

Indicator defined

Total General Government Structural Deficit as % of GDP

Data is the latest available as of 30 August 2013.

Chart 7.3b Estimated General Government Structural Deficits % GDP (2012)

Table 7.3b Estimated General Gov. Structural Deficits % GDP

Country	%	Country	%
Denmark	0.3	Slovenia	-2.7
Germany	0.3	Romania	-2.7
Sweden	0.2	Belgium	-3.0
Estonia	0.2	Lithuania	-3.2
Luxembourg	0.1	France	-3.6
Latvia	-0.3	Poland	-3.8
Bulgaria	-0.4	Malta	-4.1
Hungary	-0.7	Slovakia	-4.1
Finland	-0.7	Portugal	-4.2
Greece	-1.0	Spain	-5.5
Italy	-1.4	Cyprus	-6.7
Austria	-1.5	UK	-7.0
Czech Rep	-1.7	Rep. Ireland	-7.4
Netherlands	-2.6		

Interpretation

One of the rules contained in the 2012 EU Fiscal Compact stipulates that a Government's 'structural deficit' should not be greater than 0.5% of GDP for countries that have a debt-to- GDP ratio of over 60%. Using estimates published by the European Commission in May 2013 for 2012 seven EU member states (Denmark, Germany, Sweden, Estonia, Luxembourg, Latvia, and Bulgaria) were compliant with this rule. Finland is also compliant. Finland is permitted a structural deficit of 1% as its debt/GDP ratio is below 60%.

Technical Notes

The calculation of the structural deficit is based on the estimated gap between 'potential output' in the economy (if it were working at full capacity) and the actual output. Potential output is estimated with reference to such factors as the degree of spare capacity in an economy, the level of technology in a country, the total stock of capital and the potential supply of labour. The measure of the potential supply of labour, and therefore the structural deficit, depends crucially on what economists refer to as the 'non-accelerating wage rate of unemployment' (NAWRU) – the level of unemployment for which wages do not accelerate. Currently, the estimate used by the European Commission for the NAWRU in the Republic of Ireland is 13.4% in 2012 (AMECO database). The difference between actual and potential GDP is referred to as the 'output gap'. The value of the output gap is negative when potential GDP exceeds actual GDP. Economists use the estimated output gap to derive the estimated cyclical component of the Government deficit.

Indicator 7.4 Gross General Government Debt as a % of GDP (EU countries)

Indicator defined

Total General Government Debt as % of GDP

Data is the latest available as of 30 August 2013.

Chart 7.4 Gross General Government Debt % GDP (2012)

Table 7.4 General Government Debt % GDP (2012)

Country	%	Country	%
Estonia	10.1	Malta	72.1
Bulgaria	18.5	Austria	73.4
Luxembourg	20.8	Hungary	79.2
Romania	37.8	Germany	81.9
Sweden	38.2	Spain	84.2
Latvia	40.7	Cyprus	85.8
Lithuania	40.7	United Kingdom	90.0
Czech Rep.	45.8	France	90.2
Denmark	45.8	Belgium	99.6
Slovakia	52.1	Rep. Ireland	117.6
Finland	53.0	Portugal	123.6
Slovenia	54.1	Italy	127.0
Poland	55.6	Greece	156.9
Netherlands	71.2	EU 27	85.3

Interpretation

A rule contained in the 2012 EU Fiscal Compact stipulates that where the government debt-to- GDP ratio exceeds 60% countries must reduce it by 1/20 per annum. In 2012 the Republic of Ireland was among 14 EU member states that were above the 60% threshold.

Technical Notes

Gross General Government Debt is defined as the total consolidated gross debt at nominal value at the end of the year in the following categories of government liabilities (as defined in ESA95): currency and deposits (AF.2), securities other than shares excluding financial derivatives (AF.3, excluding AF.34), and loans (AF.4).

Appendix

Appendix 1 Details on the Calculation and Composition of Indicators 3.2a and 3.2b

Technical Notes

Clerical officer grade

Secretaries (general office clerks) (ISCO-08 411 and 4110) 'perform a range of clerical and administrative tasks in connection with money-handling operations, travel arrangements, requests for information and appointments. They record, prepare, sort, classify and fill information; sort, open and send mail; prepare reports and correspondence of a routine nature; record issue of equipment to staff; respond to telephone or electronic enquiries or forward to appropriate person; check figures, prepare invoices and record details of financial transactions made; transcribe information onto computers; and proofread and correct copy'. The international category of 'Secretaries' translates into 'Clerical Officer' grade staff in the Republic of Ireland.

Principal Officer grade

Principal Officers (or equivalent grades) in the civil service in Ireland are coded by OECD as upper middle managers (ISCO-08 12) or 'D3' staff. These 'plan, direct and co-ordinate the general functioning of a specific directorate/administrative unit within the Ministry with the support of other managers, usually within the guidelines established by a board of directors or a governing body. They provide leadership and management to teams of professionals within their particular area. These officials develop and manage the work programme and staff of units, divisions or policy areas. They establish and manage budgets, control expenditures and ensure the efficient use of resources. They monitor and evaluate performance of the different professional teams'. (Annex D of Government at a Glance).

Methodology and Definitions Note by OECD

Data refer to 2009 and were collected by the 2010 OECD survey on the Compensation of Employees in Central/Federal Governments. Officials from central Ministries and Agencies responded to the survey through the OECD Public Employment and Management Working Party.

Total compensation includes wages and salaries, employers' social contributions to statutory social security schemes or privately funded social insurance schemes, as well as unfunded employee social benefits paid by the employer, including pension payments paid through the state budget rather than through employer social contributions (mostly for some pay-as-you-go systems). Compensation was converted to USD using PPPs for GDP from the OECD National Accounts Database. Working time adjustment compensates for differences in time worked (both weekly working time and holidays). A larger working time adjustment generally means that employees work fewer hours and/or days per year. The focus on total compensation allows a comparison of the varying degrees with which governments remunerate their employees via social contributions or via higher wages and salaries. In most cases data are for six central government Ministries/Departments only (Interior, Finance, Justice, Education, Health and Environment or their equivalents). Positions are based on the International Standard Classification of Occupations (ISCO). The main limitations of the data are the less-than-full comparability of occupations

across countries, the way countries have interpreted the definition of the positions, and some lack of clarity regarding the level of social contributions and the differing costs of living across countries in capital cities.

Compensation levels are calculated by averaging the compensation of the staff in place. (It is not the middle point between the minimum and maximum salary.)

The following points should also be noted in regard to data provided for the Republic of Ireland:

1. The amount shown take into account the decrease of the salaries following the Financial Emergency Measures in the Public Interest Act 2009 (the public service pension deduction).
2. The impact of pay cuts in 2010 has not been included.
3. Estimates for employer Social contributions (10.45%) refer to staff hired after 1995 (class A1). The social insurance element of future pension liabilities to the State of employing staff is therefore captured in this figure. However, the occupational element of future pension liabilities is not included. An adjustment based on National Accounts data sources has been made for other OECD countries shown in the above Table and Chart. Hence, the present value to the Exchequer of future pension liabilities is likely to be under-estimated for the Republic of Ireland compared to some other OECD countries where pensions are funded by a separate employer contribution rather than through a 'pay-as-you go' mechanism. Further analysis and survey work is planned by OECD in regard to this aspect of international comparison.
